

# DALRYMPLE RAIL LOOP & QUARRY DAM RAISING

## PROJECT SUMMARY

In February 2015 Dalrymple Bay Coal Terminal Management (DBCTM) engaged Golding to carry out a project for the construction of a new eastern storage dam with the DBCT Rail Loop as well as the diversion of the Grendon Creek and raising of the dam embankment west of the coal stockyard.

The outcome of this project was to increase significantly the water storage capability of DBCT for environmental purposes including managing water release requirements and utilising the water for dust suppression requirements in the operations of the terminal.
